MAIL DATE		DELIVERY MODE		
		07/02/2010 PAPER		

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	10/673,673	BANGOR ET AL.	
	<b>Examiner</b>	<b>Art Unit</b>	
	David Phantana-angkool	2175	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on 14 January 2010.  
 2a) This action is **FINAL**.                    2b) This action is non-final.  
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 1-8, 11, 13, 14, 16-18 and 20-22 is/are pending in the application.  
 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.  
 5) Claim(s) \_\_\_\_\_ is/are allowed.  
 6) Claim(s) 1-8, 11, 13, 14, 16-18 and 20-22 is/are rejected.  
 7) Claim(s) \_\_\_\_\_ is/are objected to.  
 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.  
 10) The drawing(s) filed on \_\_\_\_\_ is/are: a) accepted or b) objected to by the Examiner.  
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).  
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
 a) All    b) Some \* c) None of:  
 1. Certified copies of the priority documents have been received.  
 2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

#### Attachment(s)

Art Unit: 2175

#### **DETAILED ACTION**

1. This action is responsive to the following communications: RCE filed on January 14<sup>th</sup>, 2010.
2. Claims 1-8, 11, 13-14 and 16-18, and 20-22 are pending claims.
3. Applicants amended claims 1, 11, and 20.
4. Applicants canceled claims 9 and 19.
5. Applicants added claims 21 and 22.

#### ***Continued Examination Under 37 CFR 1.114***

6. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 01/14/2010 has been entered.

#### ***Claim Rejections - 35 USC § 103***

7. **The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:**

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2175

9. **Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Grossman et al., US PG PUB# 2004/0119761 A1 (hereinafter Grossman) in view of Padwick, "Special Edition Using Microsoft Outlook 2000" (hereinafter Padwick) and in view of Kleindienst et al., US# 7,315,613 B2 (hereinafter Kleindienst), in view of Hiipakka, US PG PUB# 2003/0098892 A1 (hereinafter Hiipakka), and in further view of Fernandes, US# 6,014,135**

**As for independent claim 1:**

Grossman shows messaging system comprising:

- *a processor; a memory device coupled to the processor, the memory device storing instructions for generating a graphical user interface, the graphical user interface operable to present (0036, Grossman shows a processor and memory for generating the UI, user interface);*
- *an address menu having an identification field with a plurality of associated address fields, each of the plurality of associated address fields operable to maintain an address for a plurality of messaging receipt options, ((0053, Fig. 7 shows multiple address fields for a messaging receipt option. In Para. 0069 Grossman shows that the user may change the view of the outgoing communication history based on the type of communication. Grossman shows a plurality of messaging options in Para. 0069);*
- *an address box associated with the outgoing electronic message capable of receiving multiple user-selected addresses from the plurality of associated address fields of identification field for subsequent transfer of the outgoing electronic message to the multiple user-selected addresses (Grossman shows an address box receiving multiple addresses through use of single selector in (Fig. 4# 410, Fig. 5#510, 520, and 530; Para. 0062-0063).*

Grossman does not specifically show a *selector to initiate presentation of the address menu at the graphical user interface for user selection of multiple addresses from the plurality of address fields of identification field.* In the same field of invention Padwick teaches a selector (Figure 3.32 "To" to initiate presentation of the address menu on the graphical user interface for selecting multiple addresses as shown in "Creating a Message", Pgs. 6, 7, and Figure 3.32 in Padwick and also shown below:

**Figure 3.32. The Select Names dialog box shows the names in your Address Book. These names are listed at the left side of the dialog box.**

Accordingly it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the Grossman messaging system to incorporate a *selector* to initiate presentation of the address menu on the graphical user interface for user selection of multiple addresses from the plurality of address fields of identification field as taught by Padwick, thus allowing the user to select a plurality of names and addresses from the Message form (Padwick, "Creating a Message", Pg. 6).

Grossman and Padwick do not specifically show *wherein outgoing electronic message is formatted in a plurality of formats based upon one or more the plurality of messaging receipt options*. However Grossman does show multiple address fields for a messaging receipt option, and Padwick shows a user using a selector to select multiple addresses from a plurality of address fields. In the same field of endeavor Kleindienst teaches *wherein outgoing message is formatted in a plurality of formats based upon the messaging receipt options*. Kleindienst also teaches multi-modal messaging system. Furthermore Kleindienst clearly teach that the user may select a plurality of messaging formats to send (12:16-25). Grossman, Padwick, and Kleindienst teach a communication messaging system. Accordingly it would have been obvious to a skilled artisan at the time of the invention was made to

Art Unit: 2175

modify the system of Grossman and Padwick to incorporate the multi-modal messaging system as taught by Kleindienst, thus allowing the user to send a plurality of outgoing message formats (12:16-25).

Grossman, Padwick, and Kleindienst do not specifically show *wherein content associated with the selector is selectively presented audibly*. However in the same field of invention Hiipakka teaches *wherein content associated with the selector is selectively presented audibly* in Para 0027. In Para 0027 Hiipakka teaches an auditory icon which corresponds to a visual icon using text-to speech (TTS) synthesis. Accordingly it would have been obvious to a skilled artisan at the time of the invention was made to modify the method of Grossman, Padwick, and Kleindienst to incorporate the text-to-speech synthesis, thus allowing the system to present content in an audio format (Hiipakka, 0027).

Grossman, Padwick, and Kleindienst, and Hiipakka do not specifically teach Grossman further shows/suggests the messaging system sharing file between the user and the desired contact (Fig. 4). Grossman, Padwick, and Kleindienst do not specifically show the *an attachment engine operable to determine a type of a device associated with at least one of the multiple user-selected addresses and to automatically, without user interaction, convert a file attached to the outgoing electronic message into a format receivable by the device*. Fernandes teaches a messaging system which converts one message format type to another message type (Fernandes, 13: 45-53). Accordingly it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the system of Grossman, Padwick, Kleindienst, and Hiipakka to incorporate the converting message type function in a messaging system as taught by Fernandes, thus allowing the desired user to receive the intended message through various devices.

**As for dependent claim 2:**

Grossman-Padwick suggests the *messaging system of claim 1 wherein the identification field maintains a contact alias for a potential recipient of the outgoing electronic message* (0079). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify Grossman for the same reason as stated previously above (see claim 1 *supra*).

**As for dependent claim 3:**

Grossman-Padwick suggests the *messaging system of claim 1, wherein the graphical user interfaces is*

Art Unit: 2175

*further operable to present: a first address menu for a first user and a second address menu for a second user; and an interface engine associated with the messaging system and operable to communicatively couple a remote computer associated with the first user to the messaging system (0014, 0046, 0075). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify Grossman for the same reason as stated previously above (see claim 1 *supra*).*

**As for dependent claim 4:**

Grossman-Padwick suggests the *messaging system of claim 3 wherein the messaging system is operable to initiate communication of internet protocol packets* (Fig. 4# 450). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify Grossman for the same reason as stated previously above (see claim 1 *supra*).

**As for dependent claim 5:**

Grossman-Padwick suggests the *messaging system of claim 3, wherein the remote computer is communicatively coupled to the messaging system via a cable modem (0075)*. It would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify Grossman for the same reason as stated previously above (see claim 1 *supra*).

**As for dependent claim 6:**

Grossman-Padwick suggests the *messaging system of claim 1, wherein the address menu further comprises: a first address field associated with the identification field, the first address field for maintaining a first address type of a contact; and a second address field associated with the identification field, the second address field for maintaining a second address type of the contact* (Fig.4 shows different types of contact information associated with a user). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify Grossman for the same reason as stated previously above (see claim 1 *supra*).

**As for dependent claims 7 and 8:**

The teachings of Grossman, Padwick, and Kleindienst suggest *short messaging service address, an enhanced messaging service address, and a multimedia messaging service address* as communication type (Kleindienst, 2: 35-50). It would have been obvious to one of ordinary skill in the art at the time of

Art Unit: 2175

the invention was made to modify the method of Grossman for the same reason stated previously above (see claim 1 *supra*).

10. **Claims 11, 13, 14, 16-18, and 20-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Grossman et al., US PG PUB# 2004/0119761 A1 (hereinafter Grossman) in view of Shavit et al, US PG PUB# 2002/0160757 (hereinafter Shavit) and in further view of Kleindienst et al., US# 7,315,613 B2 (hereinafter Kleindienst), in view of Hiipakka, US PG PUB# 2003/0098892 A1 (hereinafter Hiipakka), and in further view of**

**As for independent claim 11:**

Grossman shows a messaging method comprising:

- *initiating presentation of a first user-selectable item for viewing a collection of contact information, ; (Grossman, 0048);*
- *receiving a signal indicating user selection of the first user-selectable item (Grossman, 0050);*
- *initiating a graphical user interface (GUI) element to present an address menu comprising contact information for at least one potential addressee (Clicking on Fig.4# 470, Para. 0062 will initiate a graphical user interface displaying an address menu to display a plurality of addresses),*

Grossman does not specifically show (1) *the contact information including a first selectable address of a first address type and a second selectable address of a second address type for the at least one potential addressee* (2) *recognizing a selection of the first selectable address and the second selectable address;* (3)*initiating presentation of the first selectable address and the second selectable address in an address box associated with an outgoing electronic message, wherein the outgoing electronic message is formatted based upon the first address type for transmission to the first selectable address and the outgoing electronic message is formatted based upon the second selectable address type for transmission to the second address.* In Paragraph 0053 and Fig. 7, Grossman shows multiple address fields for a messaging receipt option. In Para. 0069 Grossman shows that the user may change the view of the outgoing communication history based on the type of communication. Furthermore Grossman shows a plurality of messaging options in Para. 0069. In the same field of invention Shavit teaches a contacts database which stores a list of addresses of a potential addressee (Shavit, 0034). Shavit allows

Art Unit: 2175

the user to configure a priority table to send a message to a desired recipient with a plurality of addresses (Shavit, 0007). Accordingly it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the Grossman messaging system to incorporate (1) *the contact information including a first selectable address and a second selectable address for the at least one potential addressee* (2) *recognizing a selection of the first address and the second address*; (3) *initiating presentation of the first address and the second address in an address box associated with an outgoing electronic message* as taught by Shavit, thus allowing the user to send a message to a desired recipient with a plurality of addresses (Shavit, 0007).

Grossman and Shavit do not specifically show *wherein the outgoing electronic message is formatted based upon the first address type for transmission to the first address and the outgoing electronic message is formatted based upon the second address type for transmission to the second address*. However Grossman does show multiple address fields for a messaging receipt option, and Shavit shows a user may send a message to a plurality of destination associated with a single user. In the same field of endeavor Kleindienst teaches *wherein the outgoing electronic message is formatted based upon the first address type for transmission to the first address and the outgoing electronic message is formatted based upon the second address type for transmission to the second address*.

Kleindienst also teaches multi-modal messaging system. Furthermore Kleindienst clearly teach that the user may select a plurality of messaging formats to send (12:16-25). Grossman, Shavit, and Kleindienst teach a communication messaging system. Accordingly it would have been obvious to a skilled artisan at the time of the invention was made to modify the system of Grossman and Shavit to incorporate the multi-modal messaging system as taught by Kleindienst, thus allowing the user to send a plurality of outgoing message formats (12:16-25). The teachings of Grossman, Shavit and Kleindienst render the following limitations as obvious:

*wherein the outgoing electronic message is formatted based upon the first address type for transmission to the first address and the outgoing electronic message is formatted based upon the second address type for transmission to the second address.*

Art Unit: 2175

Grossman, Shavit, and Kleindienst do not specifically show *wherein content associated with the selector is selectively presented audibly*. However in the same field of invention Hiipakka teaches *wherein content associated with the selector is selectively presented audibly* in Para 0027. In Para 0027 Hiipakka teaches an auditory icon which corresponds to a visual icon using text-to speech (TTS) synthesis. Accordingly it would have been obvious to a skilled artisan at the time of the invention was made to modify the method of Grossman, Shavit, and Kleindienst to incorporate the text-to-speech synthesis, thus allowing the system to present content in an audio format (Hiipakka, 0027).

Grossman, Shavit, Kleindienst, and Hiipakka do not specifically teach *formatting the outgoing electronic message, without user interaction, into a first format receivable by the first selectable address based on the first address type; and formatting the outgoing electronic message, without user interaction, into a second address format receivable by the second selectable address based on the second address.* Grossman further shows/suggests the messaging system sharing file between the user and the desired contact (Fig. 4). Grossman, Padwick, and Kleindienst do not specifically show the *formatting the outgoing electronic message, without user interaction, into a first format receivable by the first selectable address based on the first address type; and formatting the outgoing electronic message, without user interaction, into a second address format receivable by the second selectable address based on the second address..* Fernandes teaches a messaging system which converts one message format type to another message type (Fernandes, 13: 45-53). Accordingly it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the system of Grossman, Shavit, Kleindienst, and Hiipakka to incorporate the converting message type function in a messaging system as taught by Fernandes, thus allowing the desired user to receive the intended message through various devices.

**As for dependent claim 13:**

Grossman- Shavit suggests the *method of claim 11, further comprising: receiving a signal indicating a request to prepare an outgoing message; and initiating presentation of a messaging graphical user interface (GUI) to present a message composition template comprising an address box and a message input box* (Grossman, Figs 4 and 7, 0059). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the graphical user interface of Grossman for the same

Art Unit: 2175

reason as stated previously above (see claim 11, *supra*).

**As for dependent claim 14:**

Grossman- Shavit suggests the *method of claim 11, further comprising: modifying the address menu in response to a user input comprising addition of another potential addressee; subsequently initiating the graphical user interface (GUI) element; and wherein the address menu comprises contact information for the at least one potential addressee and the another potential addressee* (Grossman, 0059). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the graphical user interface of Grossman for the same reason as stated previously above (see claim 11, *supra*).

**As for dependent claim 16:**

Grossman- Shavit suggests the *method of claim 11, further comprising: initiating presentation of a second user-selectable item associated with sending the outgoing electronic message to the first selectable address and the second selectable address in the address box* (Grossman, 0059 and 0060). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the graphical user interface of Grossman for the same reason as stated previously above (see claim 11, *supra*).

**As for dependent claim 17:**

Grossman- Shavit suggests the *method of claim 16, further comprising: receiving a second signal indicating a user selection of the second user-selectable item; and initiating communication of the outgoing electronic message to the first selectable address and the second selectable address* (Grossman, 0053, 0059 and 0060). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the graphical user interface of Grossman for the same reason as stated previously above (see claim 11, *supra*).

**As for dependent claim 18:**

Grossman- Shavit suggests the *method of claim 17 further comprising attaching a file to the outgoing electronic message* (Grossman, Fig. 4). It would have been obvious to one of ordinary skill in the art at

Art Unit: 2175

the time of the invention was made to modify the graphical user interface of Grossman for the same reason as stated previously above (see claim 11, *supra*).

**As for independent claim 20:**

Claim 20 contains similar substantial subject matter as claimed in claim 11 and is respectfully rejected along the same rationale.

**As for dependent claims 21 and 22:**

The teachings of Grossman, Padwick, and Kleindienst suggest *short messaging service address*, *an enhanced messaging service address*, and *a multimedia messaging service address* as communication type (Kleindienst, 2: 35-50). It would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the method of Grossman for the same reason stated previously above (see claim 11 *supra*).

11. **Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Grossman et al., US PG PUB# 2004/0119761 A1 (hereinafter Grossman) in view of Padwick, “Special Edition Using Microsoft Outlook 2000” in view of Kleindienst et al., US# 7,315,613 B2 (hereinafter Kleindienst), and in further view of Fernandes, US# 6,014,135 and in view of Hiipakka, US PG PUB# 2003/0098892 A1 (hereinafter Hiipakka).**

**As for dependent claim 9:**

Grossman shows/suggests the above limitations (see claims 1, 7 and 8, *supra*). Grossman further shows/suggests the messaging system sharing file between the user and the desired contact (Fig. 4). Grossman, Padwick, and Kleindienst do not specifically show the *system of claim 8, further comprising an attachment engine operable to convert a file attached to an outgoing message into a format receivable by a device associated with a messaging receipt option*. Fernandes teaches a messaging system which converts one message format type to another message type (Fernandes, 13: 45-53). Accordingly it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify the system of Grossman, Padwick, Kleindienst, and Hiipakka to incorporate

Art Unit: 2175

the converting message type function in a messaging system as taught by Fernandes, thus allowing the desired user to receive the intended message through various devices.

**It is noted that any citation to specific, pages, columns, lines, or figures in the prior art references and any interpretation of the references should not be considered to be limiting in any way. A reference is relevant for all it contains and may be relied upon for all that it would have reasonably suggested to one having ordinary skill in the art. In re Heck, 699 F.2d 1331, 1332-33, 216 USPQ 1038, 1039 (Fed. Cir. 1983) (quoting In re Lemelson, 397 F.2d 1006, 1009, 158 USPQ 275, 277 (CCPA 1968)).**

The Examiner notes MPEP § 2144.01, that quotes *In re Preda*, 401 F.2d 825, 159 USPQ 342, 344 (CCPA 1968) as stating “in considering the disclosure of a reference, it is proper to take into account not only specific teachings of the reference but also the inferences which one skilled in the art would reasonably be expected to draw therefrom.” Further MPEP 2123, states that “a reference may be relied upon for all that it would have reasonably suggested to one having ordinary skill the art, including nonpreferred embodiments. *Merck & Co. v. Biocraft Laboratories*, 874 F.2d 804, 10 USPQ2d 1843 (Fed. Cir.), cert. denied, 493 U.S. 975 (1989).

#### ***Response to Arguments***

12. Applicant's arguments with respect to claims 1-8, 11, 13-14 and 16-18, and 20 have been considered but are moot in view of the new ground(s) of rejection.

#### ***Conclusion***

13. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Phantana-angkool whose telephone number is 571-272-2673. The examiner can normally be reached on M-F, 9:00-5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William Bashore can be reached on 571-272-4088. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
